

## Warner Draw Watershed Supplemental Plan No. 10 & Final Environmental Impact Statement for the Gould Wash Flood Protection Project Washington County, Utah

### Project Information

The United States Department of Agriculture Natural Resources Conservation Service (NRCS), Washington County, and Hurricane City announce the availability of the Warner Draw Watershed Supplemental Watershed Plan No. 10 and Final Environmental Impact Statement (Plan-EIS) for the Gould Wash Flood Protection Project (Project). The Project preferred alternative proposes improvements along Gould Wash through Hurricane City and installation of a dry detention dam on land managed by the Bureau of Land Management upstream of Hurricane City, in Washington County, Utah. The Project would reduce flooding in Hurricane City, protecting people, structures, transportation infrastructure, public utilities, and property from floodwater damage.

Reviewers provided their comments to NRCS on the Draft Plan-EIS during the allotted review/comment period (September 22, 2025 – January 6, 2026) and the Final Plan-EIS was updated to address the comments. **The Final Plan-EIS is available for review and comment for 45 days from March 20 to May 4, 2026.**

A hard copy of the Final Plan-EIS is available for review at the Hurricane Branch Library (36 S 300 W, Hurricane, UT 84737) and an electronic copy can be downloaded from the NRCS Project webpage found at:
